Introduction to Theoretical Linguistics

Phonetics, Phonology and Morphology

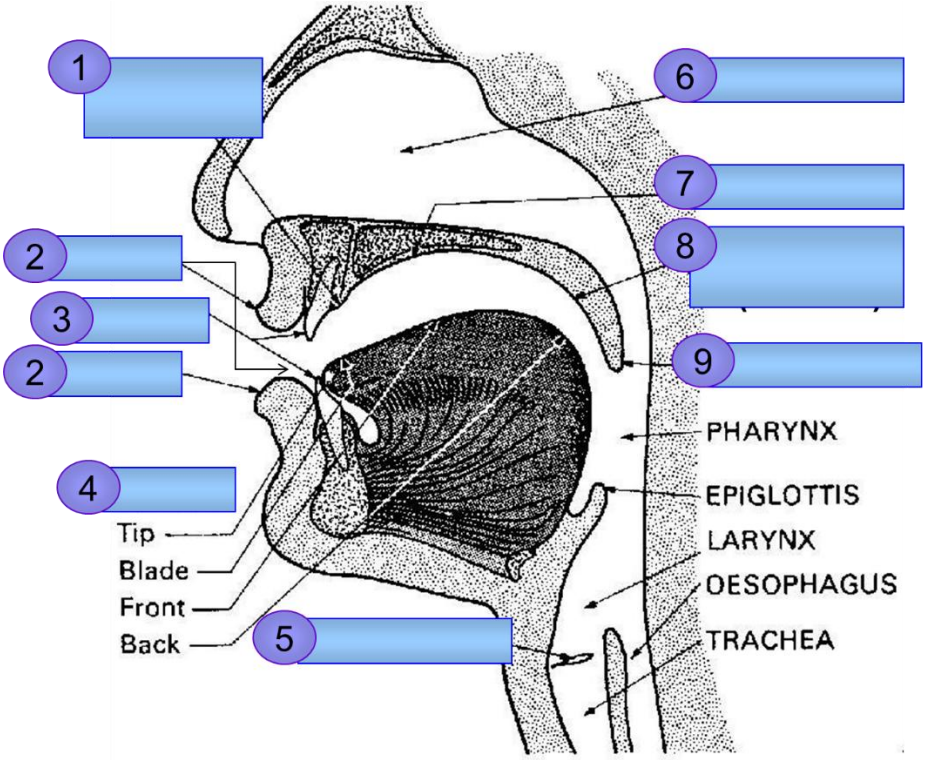
Assignment 1

Name _____ ID _____

NO AIs! Print this out, and do hand-write your answers.

Ex 1 Consonants

Name the parts numbered 1 through 9, which play an important role in articulation.



1 _____ 6 _____

2 _____ 7 _____

3 _____ 8 _____

4 _____ 9 _____

5 _____

Exv2 Consonants

Circle all of the symbols below that represent voiceless sounds.

[s]	[d]	[g]	[ð]	[tʃ]	[b]	[t]	[ʔ]	[r]	[θ]	[p]
[o]	[f]	[ʃ]	[z]	[k]	[j]	[m]	[v]	[h]	[w]	[l]

Ex 3 Consonants

For each of the following description, write down the IPA symbol that represents the sound and provide an English word that contains the sound.

a) voiced alveolar lateral approximant [ ] _____

b) high front tense unrounded vowel [ ] _____

c) voiced (inter)dental fricative [ ] _____

d) voiceless bilabial stop [ ] _____

e) voiced velar nasal stop [ ] _____

Ex 4 Consonants

Please finish the following midsagittal view of the vocal tract by drawing the configurations of lips, soft palate (velum), tongue position. Then, please describe the features of the target sound by filling out the information (Please look at the example before you start).

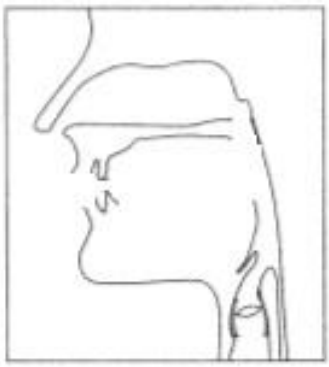
Example.

Sound: [k]

- Active articulator: **Tongue body**
- Passive articulator: **Soft Palate (velum)**
- Velum opening: **No**
- Manner of the articulation: **Stop**
- Vocal fold vibration: **No**
- Nasality: **No**

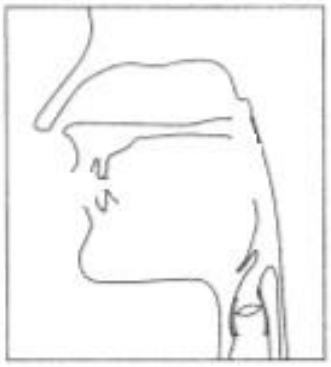
a) Sound: [**n**]

- Active articulator: _____
- Passive articulator: _____
- Velum opening: _____
- Manner of the articulation: _____
- Vocal fold vibration: _____
- Nasality: _____



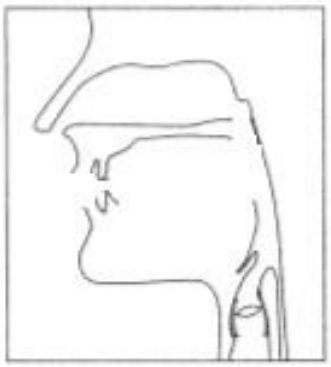
b) Sound: [**ŋ**]

- Active articulator: _____
- Passive articulator: _____
- Velum opening: _____
- Manner of the articulation: _____
- Vocal fold vibration: _____
- Nasality:



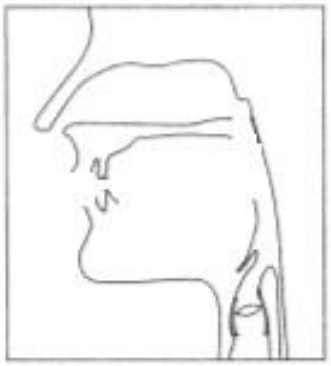
c) Sound: [**p**]

- Active articulator: _____
- Passive articulator: _____
- Velum opening: _____
- Manner of the articulation: _____
- Vocal fold vibration: _____
- Nasality:



d) Sound: [**θ**]

- Active articulator: _____
- Passive articulator: _____
- Velum opening: _____
- Manner of the articulation: _____
- Vocal fold vibration: _____
- Nasality: _____



Ex 5 Consonants

The following figure shows the results of recording the words *can* and *cat* using Praat. Actually, in one of these words, the final consonant influences the preceding vowel represented by the letter *a*, resulting in a change in the vowel's sound quality. To be more precise, the articulation of the final consonant begins while the *a* is still being pronounced. Select which word, *can* or *cat*, exhibits this effect (i.e., choose the word corresponding to Figure 1), and state the reason for your choice. If necessary, you may record your own voice using Praat.
